Implant Rippling

The Serene Difference

- **Innovative Design:** Features a multi-layered internal structure that stabilizes saline movement and limits visible implant rippling.
- **Natural Fill:** Saline is a safe, biocompatible solution¹ that is harmlessly absorbed by the body in the unlikely event of deflation or leakage.
- **Hassle-Free Maintenance:** No MRI required for regular rupture monitoring¹, simplifying follow-up care and reducing costs.
- **Exceptional Durability:** Provides lower rates of capsular contracture and deflation, proven in a 10-year study¹ compared to other implant options.
- **Lifetime Assurance:** Backed by the Pure Confidence Warranty offering lifetime implant replacement.

“The **Serene Implant** gives me peace of mind. . . They feel natural and allow me to lead the active lifestyle I am used to.”

Tammy B., Patient

WARNING:

- Breast implants are not considered lifetime devices. The longer people have them, the greater the chances are that they will develop complications, some of which will require more surgery.
- Breast implants have been associated with the development of a cancer of the immune system called breast implant-associated anaplastic large cell lymphoma (BIA-ALCL). This cancer occurs more commonly in patients with textured breast implants than smooth implants, although rates are not well defined. Some patients have died from BIA-ALCL.
- Patients receiving breast implants have reported a variety of systemic symptoms such as joint pain, muscle aches, confusion, chronic fatigue, autoimmune diseases and others. Individual patient risk for developing these symptoms has not been well established. Some patients report complete resolution of symptoms when the implants are removed without replacement.
