

**INSTRUCTIONS FOR USE
IN THE UNITED STATES AND CANADA
PureGraft® 850 System****INSTRUCTIONS FOR USE
ALL COUNTRIES EXCEPT UNITED STATES AND CANADA
PureGraft® 850 System****EN: INSTRUCTIONS FOR USE**

This product is certified as a medical device in the European Union under the Medical Device Directive 93/42/EEC by SGS CE1639, exclusively for the indications of autologous fat transfer. Other non-medical uses such as aesthetic body contouring ascribed to this device are not within the scope of CE certification, and users should be aware product performance and/or safety has not been evaluated by SGS for these purposes.

DESCRIPTION

The Puregraft® 850 System is a sterile, single use, closed system intended for the preparation and delivery of autologous fat grafts back to the same patient for cosmetic and reconstructive surgery applications. The Puregraft 850 System is composed of the following components:

- Puregraft 850 Bag

- Combined Adapter

For optimal performance, the Puregraft 850 System should be used in conjunction with the Puregraft Instrument Set. This set is composed of the following reusable, autoclavable components:

- Puregraft Easel

- Puregraft Slider

The Puregraft Easel was designed as a stand to hold the Puregraft 850 Bag for optimal fluid flow and the Puregraft Slider facilitates the movement of excess fluids away from the tissue and into the Puregraft 850 Drain Bag while guiding the tissue towards the port labeled "Tissue" for graft extraction. For storage, sterilization, and proper instructions for use of these products, see the separate Instructions for Use included in the product packaging of the Puregraft 550/5 Instrument Set.

INDICATIONS FOR USE

The Puregraft 850 System is indicated for use in the harvesting, filtering and transferring of autologous fat tissue for re-injecting back into the same patient for aesthetic body contouring.

CONTRAINDICATIONS The following are contraindications for use of the Puregraft 850 System: Intravenous applications.

- Intravenous applications.

Sterility

- The Puregraft 850 System is sterilized with gamma irradiation.

STORAGE AND HANDLING

- Use only if sterilization indicator is red.

WARNINGS

- Single Use Only – Do Not Re-use.

- For Autologous Use Only.

- The use of this fat transfer may be used for reimplantation without any additional manipulation. Any manipulations beyond those outlined in this Instruction for Use are not recommended.

- Do not attempt to re-use the Puregraft 850 System during the same procedure. Re-use may compromise the sterility and adversely affect performance of the system.

- This device will not, in and of itself, produce significant weight reduction.

- This device should be used with extreme caution in patients with chronic medical conditions, such as diabetes, heart or lung disease, circulatory diseases, or obesity.

- The loss of endogenous body fluid may adversely affect intra- and/or postoperative hemodynamic stability and patient safety. The capability of providing adequately, timely fluid replacement is essential for patient safety.

- Do not overfill the Puregraft 850 Bag with more than 1275 mL of total volume of tissue and/or washing solution.

PRECAUTION

- Inspect the Puregraft 850 System package for signs of damage prior to use.

- The Puregraft 850 System is for single use only and must be used immediately after removal from the sterile packaging.

- Discard the entire Puregraft 850 System if the packaging is damaged, opened or the sterilization indicator is invalid.

- Aseptic techniques must be used to minimize the possibility of contamination of the Puregraft 850 System.

- Treat all blood and fluids using Universal Precautions (Blood-borne Pathogen Precautions).

- This device is designed to contour the body by removing localized deposits of excess fat through small incisions.

- Use of this device is limited to those physicians who, by means of residency training or sanctioned continuing medical education, have demonstrated proficiency in suction lipoplasty.

- Results of this procedure will vary depending upon patient age, surgical sites, and experience of the surgeon performing the procedure.

- Results of this procedure may or may not be permanent.

- The amount of fat removed should be limited to that necessary to achieve a desired cosmetic effect.

- The Puregraft 850 System is recommended to be used in combination with a Toomey style syringe and the supplied Combined Adapter for tissue transfer into and out of the system.

- There is currently no use/ function for the port labeled "AUX". Do not use this port for tissue or fluid addition/ removal.

- The Puregraft 850 System is intended to receive adipose tissue harvested with a 3mm diameter Mercedes-Tip Cannula.

- Overinflating or overfilling of the Puregraft 850 Bag may result in biohazard to the operating staff and/or device malfunction.

OPERATING INSTRUCTIONS PREPARATIONS:

- 1. Place sterile Puregraft Easel and Slider in an upright operating position.

- 2. Open Tyvek pouches containing the Puregraft 850 System, and hang the Puregraft 850 Bag on the Easel.

- Place the Puregraft 850 Drain Bag well below the level of the Puregraft 850 Bag, and ensure that the Easel is positioned near the port labeled "Tissue".

- 3. Note: Lactated Ringer's can be added to the port labeled "Inlet" by using an optional Inlet Tubing Set or directly into the port labeled "Wash" using a Toomey style syringe. Lactated Ringer's can also be added via port labeled "Tissue" or a Combined Adapter and Toomey style syringes. If using the Inlet Tubing Set, connect the male luer end to the port labeled "Inlet" on the Puregraft 850 Bag, and hand off the tubing so that the Lactated Ringer's bag can be spiked. Close the pinch clamp to prevent Lactated Ringer's from entering the Puregraft 850 Bag at this time. If using a syringe, place Lactated Ringer's into a sterile bowl on the sterile field.

- TISSUE COLLECTION AND ADDITION:

- 1. Inspect the Puregraft 850 System package for signs of damage prior to use.

- The Puregraft 850 System is for single use only and must be used immediately after removal from the sterile packaging.

- Discard the entire Puregraft 850 System if the packaging is damaged, opened or the sterilization indicator is invalid.

- Aseptic techniques must be used to minimize the possibility of contamination of the Puregraft 850 System.

- Treat all blood and fluids using Universal Precautions (Blood-borne Pathogen Precautions).

- This device is designed to contour the body by removing localized deposits of excess fat through small incisions.

- Use of this device is limited to those physicians who, by means of residency training or sanctioned continuing medical education, have demonstrated proficiency in suction lipoplasty.

- Results of this procedure may or may not be permanent.

- The amount of fat removed should be limited to that necessary to achieve a desired cosmetic effect.

- The Puregraft 850 System is recommended to be used in combination with a Toomey style syringe and the supplied Combined Adapter for tissue transfer into and out of the system.

- The Puregraft 850 System is intended to receive adipose tissue harvested with a 3mm diameter Mercedes-Tip Cannula.

OPERATING INSTRUCTIONS:**PREPARATIONS:**

- 1. Place sterile Puregraft Easel and Slider in an upright operating position.

- 2. Open Tyvek pouches containing the Puregraft 850 System, and hang the Puregraft 850 Bag on the Easel.

- Place the Puregraft 850 Drain Bag well below the level of the Puregraft 850 Bag, and ensure that the Easel is positioned near the port labeled "Tissue".

- 3. Note: Lactated Ringer's can be added to the port labeled "Inlet" by using an optional Inlet Tubing Set or directly into the port labeled "Wash" using a Toomey style syringe. Lactated Ringer's can also be added via port labeled "Tissue" or a Combined Adapter and Toomey style syringe. If using the Inlet Tubing Set, connect the male luer end to the port labeled "Inlet" on the Puregraft 850 Bag, and hand off the tubing so that the Lactated Ringer's bag can be spiked. Close the pinch clamp to prevent Lactated Ringer's from entering the Puregraft 850 Bag at this time. If using a syringe, place Lactated Ringer's into a sterile bowl on the sterile field.

- 4. Aspiritically collect adipose tissue into a Toomey style syringe and attach a Combined Adapter to each filled syringe.

- Note: If alternate means of adipose tissue harvest are used, tissue should be aspiritically transferred to the Puregraft 850 Bag using Toomey syringes and the port labeled "Tissue".

- 5. Attach the tissue-filled syringe to the Puregraft 850 Bag by placing the male portion of the Combined Adapter into the port labeled "Tissue" and pushing the syringe plunger to empty the syringe contents into the bag.

- Note: Minor fluid seepage can occur during introduction and removal of tissue through the port labeled "Tissue".

- 6. Introduce 30-50% more tissue than the total desired graft volume, for a total volume between 200-850mL of tissue into the Puregraft 850 Bag by repeating step 5 above. Ensure excess fluid is draining into the Puregraft 850 Drain Bag.

- GRAFT WASHING AND PROCESSING:

- 7. Close the pinch clamp on the Puregraft 850 Drain Bag. If using the Inlet Tubing Set, open the pinch clamp to the bag of Lactated Ringer's and add approximately 10-425 mL to the Puregraft 850 Bag at 2:1 ratio of graft tissue: Lactated Ringer's according to the table below:

- INPUT TISSUE VOLUME (mL)

- 200

- 400

- 600

- 850

- WASH VOLUME (mL)

- 100

- 200

- 300

- 425

- DRAIN TIME (MIN)

- 2

- 3

- 4

- 6

Note: If using the Syringe Method, draw Lactated Ringer's from sterile bowl into syringe and connect to port labeled "Inlet" on the Puregraft 850 Bag. Continue to add Lactated Ringer's until the appropriate volume is achieved.

8. Detach the Puregraft 850 Bag from the Easel. Gently invert the tissue-filled Puregraft 850 Bag manually for approximately 30 seconds to ensure that all corners of the bag are accessed.

9. Open the sterile Puregraft 850 Drain Bag and allow fluid to drain from the Puregraft 850 Bag into the Puregraft 850 Drain Bag for approximately 2-6 minutes (see Table 1 for detailed drain time information).

10. Repeat Steps 7 & 8 to repeat tissue wash, and open pinch clamp on Puregraft 850 Drain Bag to drain excess fluid for 2-6 minutes depending on preferred graft hydration level.

11. Use Puregraft Slider to guide tissue towards port labeled "Tissue". Close the pinch clamp to the Puregraft 850 Drain Bag.

12. Aspiritically attach a Combined Adapter to an empty sterile Toomey syringe.

13. Attach the sterile syringe to the Puregraft 850 Bag by placing the male portion of the Combined Adapter into the port labeled "Tissue".

14. Remove tissue from the Puregraft 850 Bag by slowly pulling the syringe until syringe is filled. Use Puregraft Slider as needed to extract the remaining tissue from the Puregraft 850 Bag.

15. Once tissue is removed from the bag, properly dispose of all disposable components using Universal Precautions for Blood-borne Pathogens.

16. Once tissue is removed from the bag, properly dispose of all disposable components using Universal Precautions for Blood-borne Pathogens.

17. Use Puregraft Slider to guide tissue towards port labeled "Tissue". Close the pinch clamp to the Puregraft 850 Drain Bag.

18. Aspiritically attach a Combined Adapter to an empty sterile Toomey syringe.

19. Attach the sterile syringe to the Puregraft 850 Bag by placing the male portion of the Combined Adapter into the port labeled "Tissue".

20. Remove tissue from the Puregraft 850 Bag by slowly pulling the syringe until syringe is filled. Use Puregraft Slider as needed to extract the remaining tissue from the Puregraft 850 Bag.

21. Once tissue is removed from the bag, properly dispose of all disposable components using Universal Precautions for Blood-borne Pathogens.

22. Once tissue is removed from the bag, properly dispose of all disposable components using Universal Precautions for Blood-borne Pathogens.

23. Once tissue is removed from the bag, properly dispose of all disposable components using Universal Precautions for Blood-borne Pathogens.

24. Once tissue is removed from the bag, properly dispose of all disposable components using Universal Precautions for Blood-borne Pathogens.

25. Once tissue is removed from the bag, properly dispose of all disposable components using Universal Precautions for Blood-borne Pathogens.

26. Once tissue is removed from the bag, properly dispose of all disposable components using Universal Precautions for Blood-borne Pathogens.

27. Once tissue is removed from the bag, properly dispose of all disposable components using Universal Precautions for Blood-borne Pathogens.

28. Once tissue is removed from the bag, properly dispose of all disposable components using Universal Precautions for Blood-borne Pathogens.

29. Once tissue is removed from the bag, properly dispose of all disposable components using Universal Precautions for Blood-borne Pathogens.

- Gooi de gehele Puregraft 850 weg als de verpakking beschadigd is, geopend is of als de sterilisatie-indicator ongeldig is.
- Er dienen aseptische technieken te worden gebruikt om de kans op besmetting van de Puregraft 850 te minimaliseren.
- Behandel alle bloed en vloeistoffen met universele voorzorgsmaatregelen (voorzorgsmaatregelen voor ziektekielen in bloed).
- Als de Puregraft 850 tevel wordt opgeblazen of gevuld, kan dit een biogevare voor het bedienend personeel en/of de patiënt veroorzaken.
- Het is aanbevolen dat de Puregraft 850 te gebruiken samen met een Toomey-type spuit en de meegereichte Gecombineerde Adapter om het weefsel in het systeem te brengen en eruit te halen.
- De Puregraft 850 is bedoeld voor wettelijk dat wordt weggenomen met een canula van 3 mm diameter met een Mercedes-punt.

BEDIENINGSSINTEKES:

VOORBEREIDING:

1. Plaats steriele Puregraft-ezel o/schuit in een rechtopstaande werkpositie.
2. Open de Tyvek®-verpakking waardoor de Puregraft 850 te hangt de Puregraft 850-zak aan de ezel. Plaats de o/schuit in de tyvek®-verpakking.
3. NB: Er kan gelacteerde Ringer-oplossing worden toegevoegd aan de met "Wash" gelabelde opening door de inlaatstangenset optioneel te gebruiken, of direct in de met "Wash" gelabelde opening met een Luer-Lock-spuut. Gelacteerde Ringer-oplossing is ook via de "Tissue" spuit en de o/schuit toegevoegd met een Gecombineerde Adapter en een Toomey-type spuit. Verwijder de luchtklep en de mannelijke Luer-aansluiting met de met "Wash" gelabelde opening van de Puregraft 850-zak en geef de slang af zodat de gelacteerde Ringer-oplossing kan worden aangesloten. Sluit de knijpklep ten voorkomen dat er gelacteerde Ringer-oplossing op dat moment in de Puregraft 850-zak terechtkomt. Giet bij gebruik van een spuit gelacteerde Ringer-oplossing in een steriele schaal op het steriele veld.

VERZAMELEN IN TOEVOEGEN WEEFSEL:

4. Verwijder de steriele aseptisch in een Toomey-type spuit en plaats een Gecombineerde Adapter op elke gevulde spuit.

NB: Als er een alternatieve methode voor wettelikelektie wordt gebruikt, dient het weefsel aseptisch met Toomey-spuiten van andere slangen en naarmate de Puregraft 850-zak in zorg dat de knijpklep zich nabij de opening in de open stand bevindt.

5. Plaats de met weefsel gevulde spuit in de Puregraft 850-zak door de mannelijke kant van de Gecombineerde Adapter in de met "Tissue" gelabelde opening te steken en druk de zuiger van de spuit in om de inhoud in de zak te laten lopen.

NB: Er kan tijdens het inbrengen en verwijderen van weefsel via de met "Tissue" gelabelde opening een beetje vloeistof weglopen.

6. Voeg 30-50% meer desizante aan de Puregraft 850-zak toe dan het totale gewicht transplantaatvolume voor een totaal weefselvolume van 200-850 ml door bovenstaande stap 5 te herhalen.

WASSEN EN VERWERKEN TRANSPLANTAAT:

7. Sluit de knijpklep op de Puregraft 850-afvalzak. Open bij gebruik van de inlaatstangenset de knijpklep van de zak met gelacteerde Ringer-oplossing en voeg ongeveer 100 tot 425 ml toe aan de Puregraft 850-zak in de verhouding 2:1 voor transplantaatweefsel. Geleide Ringer-oplossing volgtende onderstaande tabel 1:

Weefselvolume (ml)	Rengingsvolume (ml)	Uitloopijd (MIN)
200	100	2
400	200	3
600	300	4
850	425	6

Tabel 1

NB: Zorg bij gebruik van de spuitmethode gelacteerde Ringer-oplossing uit de steriele schaal in de spuit en steek deze in de met "Wash" gelabelde opening van de Puregraft 850-zak. Bijl gelacteerde Ringer-oplossing toevoegen tot de juiste volume is bereikt.

8. Verwijder de Puregraft 850-zak uit de ezel. Druk de met weefsel gevulde Puregraft 850 voorzichtig met de hand ongeveer 30 seconden lang zodat alle hoeven van de zak gemengd worden.

9. Open de knijpklep op de Puregraft 850-afvalzak en laat de vloeistof ongeveer 2-6 minuten lang van de Puregraft 850-zak naar de Puregraft 850-afvalzak lopen (zie tabel 1 voor gedetailleerde uitleg), sluit dan de knijpklep.

10. Herhaal stap 7 en 8 voor de weefselreiniging, herhalen, open de knijpklep van de Puregraft 850-afvalzak en afvoer de vloeistof van de overvloedige reinigingsvloeistof te laten weglopen, afhankelijk van de gewenste methode van het transplantaat.

11. Gebruik de Puregraft-ezel om het weefsel naar de met "Tissue" gelabelde opening te duwen. Sluit de knijpklep op de Puregraft 850-afvalzak.

VERWIJDEREN TRANSPLANTAAT:

12. Plaats een Gecombineerde Adapter aseptisch op een lege steriele Toomey-spuut.

13. Plaats de steriele Puregraft 850-door de mannelijke kant van de Gecombineerde Adapter in de met "Tissue" gelabelde opening te steken.

14. Verwijder weefsel uit de Puregraft 850-zak door langzaam aan de zuiger te trekken totdat de spuit vol zit. Gooi de Puregraft 850-ezel in de steriele schuif om het resterende weefsel uit de Puregraft 850-zak te halen.

NB: Er kan een aanzienlijke hoeveelheid vloeistof in de laatste 10-20 ml resterende weefsel zitten. Gooi de laatste 20 ml weefselextract weg.

15. Gooi zodra het weefsel uit de zak is verwijderd alle wegwerperderelen correct weg volgens universele voorzorgsmaatregelen voor ziektekielen in bloed.

Europese rapportagevereisten: Elk ernstig incident dat zich heeft voorgedaan met betrekking tot het hulpmiddel, moet worden gemeld aan Biinni Health Tech en de bevoegde autoriteit van de lidstaat waarin u, als gebruiker en/of patiënt, bent gevestigd.

PT-Instruções de utilização

Este produto está certificado pelo SGS CE1629 como um dispositivo médico na União Europeia sob a Diretiva 93/42/EC relativa aos Dispositivos Médicos, exclusivamente para as indicações de transferência de gordura autóloga. Outras utilizações não médicas atribuídas a este dispositivo, como o contorno corporal estético, não estão abrangidas pela certificação CE e os utilizadores devem estar cientes de que o desempenho e/ou a segurança do produto não foram avaliados pela SGS para essas finalidades.

DESCRICAO

O sistema Puregraft® 850 é um sistema fechado estéril, de utilização única, destinado à preparação e administração de enxertos de gordura autóloga no mesmo paciente, para aplicações de cirurgia plástica e reparadora. O sistema Puregraft 850 é composto pelos seguintes componentes:

• Puregraft 850 Bag

• Puregraft 850 Drain Bag

• Combined Adapter

Para um desempenho ideal, o sistema Puregraft 850 deve ser utilizado em conjunto com o conjunto de instrumentos Puregraft. Este conjunto é composto pelos seguintes componentes reutilizáveis e autoclaváveis:

• Suporte Puregraft

• Toomey® Style

O suprimento Puregraft foi concebido como um apêlo para sustentar o saco Puregraft 850 de forma a obter um fluxo de fluido ideal e o sistema dedicando Puregraft facilita o movimento do excesso de fluido para longe do tecido e para o saco de drenagem Puregraft 850, enquanto guia o tecido em direção à porta com o rótulo "Tissue" (tecido). Para obter as instruções de armazenamento, esterilização e as instruções adequadas para a utilização destes produtos, consulte as instruções de utilização específicas incluídas no embalagem do conjunto de instrumentos Puregraft.

INDICAÇÕES DE UTILIZAÇÃO

O sistema Puregraft 850 é indicado para ser utilizado na colheita, filtragem e transferência de tecido adiposo.

CONTRAINDICAÇÕES

As seguintes são contraindicações para a utilização do sistema Puregraft 850:

• Aplicações intravasivas.

ESTERILIDADE

O sistema Puregraft 850 é esterilizado com irradiação gama.

ARMazenamento e MANUSEAMENTO

Utilize somente se o indicador de esterilização estiver vermelho.

ADVERTÊNCIAS

• Apenas para utilização única - Não reutilizar.

• Utilizar exclusivamente para a utilização autóloga.

• O sistema deve estar familiarizado com o funcionamento do sistema Puregraft 850 e os procedimentos cirúrgicos antes de realizar a cirurgia.

• Não teme neutrólise de tecido adiposo com Puregraft 850 durante o mesmo procedimento. A reutilização pode comprometer a esterilidade e afetar significativamente o desempenho do sistema.

• A reutilização de um dispositivo de utilização única apresenta riscos significativos para o bom funcionamento do dispositivo devido à ausência das instruções de utilização (IFU) do fabricante.

• O risco de infecção é aumentado quando a utilização de um dispositivo de utilização única resulta em ferimentos no paciente devido a interações químicas desencadeadas com o dispositivo e/ou a exposição do paciente a agentes de limpeza resíduais.

• A reutilização de um dispositivo de utilização única constitui sérios riscos para o paciente, incluindo a perda de esterilidade que pode resultar em infecção.

• A reutilização de um dispositivo de utilização única constitui sérios riscos para o paciente, incluindo a transmissão de doenças infeciosas para o paciente e/ou o profissional.

• Não deve ser demolido o saco Puregraft 850 com mais de 1275 ml do volume total de tecido ou solução de lavagem.

• O saco deve ser imediatamente removido da embalagem quando o saco Puregraft 850 é usado no material de dímero.

• A reesterilização desse dispositivo pode resultar em danos significativos ou perda de integridade do dispositivo.

• Nunca deve ser removida a membrana protetora do saco Puregraft 850 para lidar com o sangue ou fluidos.

• Insular ou encher excessivamente o saco Puregraft 850 pode resultar em risco biológico para a equipa cirúrgica e/ou o paciente - nomeadamente o risco de infecção.

• Deve ser evitado de utilizar o saco Puregraft 850 em conjunto com uma seringa Toomey e com o adaptador combinado fornecido para transferir o tecido para dentro e para fora do sistema.

• O sistema Puregraft 850 destina-se a receber tecido recolhido com uma canula com ponta Mercedes de 3 mm de diâmetro.

INSTRUÇÕES DE FUNCIONAMENTO:

1. Coloque o suporte Puregraft e o sistema desinfetante estéril num suporte de funcionamento vertical.

2. Abra as portas Tyvek® que contêm o sistema Puregraft 850 e pendure o saco Puregraft 850 no suporte. Coloque o saco de drenagem Puregraft 850 para utilização e coloque-o sobre o saco Puregraft 850 e certifique-se de que o grampo de aperto está posicionado perante a porta com o rótulo "Wash" (lavagem) utilizando uma seringa Toomey Lock. Também é possível adicionar a língua de Ringer através da porta com o rótulo "Tissue" (tecido) utilizando um adaptador combinado e uma seringa do esteril Toomey. Se estiver a utilizar um conjunto de tubos de entradas opacionais ou diretamente na porta com o rótulo "Wash" (lavagem) utilizando uma seringa Toomey Lock.

3. Nota: Pode adicionar a língua de Ringer à porta com o rótulo "Wash" (lavagem) utilizando uma seringa Toomey Lock e também é possível adicionar a língua de Ringer através da porta com o rótulo "Tissue" (tecido) utilizando um adaptador combinado e uma seringa do esteril Toomey.

4. Retire a seringa e insira-a no sistema desinfetante estéril.

5. Retire a seringa e insira-a no sistema desinfetante estéril.

6. Introduza 30-50% de tecido adicional relativamente ao volume total de enxerto desejado, para um volume total entre 200-850 ml de tecido no saco Puregraft 850, repetindo o passo 5 acima. Certifique-se de que o excesso de fluido seja drenado para o saco de drenagem Puregraft 850.

COLETA E ADIÇÃO DE TECIDO:

1. Retire a seringa e insira-a no sistema desinfetante estéril.

2. Feche o grampo de aperto no saco de drenagem Puregraft 850. Se estiver a utilizar um conjunto de tubos de entradas opacionais ou diretamente na porta com o rótulo "Wash" (lavagem) utilizando uma seringa Toomey Lock.

3. Nota: Se forem utilizados meios alternativos de coleta de tecido adiposo, o tecido deve ser transferido asepticamente para o saco Puregraft 850 utilizando seringas Toomey ou outros tubos e conectores.

4. Ligue a seringa cheia com tecido ao saco Puregraft 850 colocando a parte macho do adaptador combinado na porta com o rótulo "Tissue" (tecido) e empurrando o êmbolo da seringa para esvaziar o conteúdo de tecido através da porta com o rótulo "Wash" (lavagem).

5. Note que ocorrerá uma pequena infiltração de fluido durante a introdução e a remoção de tecido através da porta com o rótulo "Wash" (lavagem).

6. Introduza 30-50% de tecido adicional relativamente ao volume total de enxerto desejado, para um volume total entre 200-850 ml de tecido no saco Puregraft 850, repetindo o passo 5 acima. Certifique-se de que o excesso de fluido seja drenado para o saco de drenagem Puregraft 850.

BEDININGSSINTEKES:

VOORBEREIDING:

1. Plaats steriele Puregraft-ezel o/schuit in een rechtopstaande werkpositie.

2. Open de Tyvek®-verpakking waardoor de Puregraft 850-zak aan de ezel. Plaats de o/schuit in de tyvek®-verpakking.

3. NB: Er kan gelacteerde Ringer-oplossing worden toegevoegd aan de met "Wash" gelabelde opening door de inlaatstangenset optioneel of directamente na de met "Wash" gelabelde opening met een Luer-Lock-spuut. Gelacteerde Ringer-oplossing is ook via de "Tissue" spuit en de o/schuit toegevoegd met een Gecombineerde Adapter en een Toomey-type spuit. Verwijder de luchtklep en de mannelijke Luer-aansluiting met de met "Wash" gelabelde opening van de Puregraft 850-zak en geef de slang af zodat de gelacteerde Ringer-oplossing kan worden aangesloten. Sluit de knijpklep ten voorkomen dat er gelacteerde Ringer-oplossing in een steriele schaal op het steriele veld.

LAVAGEM E PROCESSAMENTO DO EXERTO:

1. Feche o grampo de aperto no saco de drenagem Puregraft 850. Se estiver a utilizar um conjunto de tubos de entradas opacionais ou diretamente na porta com o rótulo "Wash" (lavagem) utilizando uma seringa Toomey Lock.

2. Open de Tyvek®-verpakking waardoor de Puregraft 850-zak aan de ezel. Plaats de o/schuit in de tyvek®-verpakking.

3. NB: Er kan gelacteerde Ringer-oplossing worden toegevoegd aan de met "Wash" gelabelde opening door de inlaatstangenset optioneel of directamente na de met "Wash" gelabelde opening met een Luer-Lock-spuut. Gelacteerde Ringer-oplossing is ook via de "Tissue" spuit en de o/schuit toegevoegd met een Gecombineerde Adapter en een Toomey-type spuit. Verwijder de luchtklep en de mannelijke Luer-aansluiting met de met "Wash" gelabelde opening van de Puregraft 850-zak en geef de slang af zodat de gelacteerde Ringer-oplossing kan worden aangesloten. Sluit de knijpklep ten voorkomen dat er gelacteerde Ringer-oplossing in een steriele schaal op het steriele veld.

NOTA: De gelacteerde Ringer-oplossing kan worden toegevoegd aan de met "Wash" gelabelde opening door de inlaat
